

M-05 — Writing Email With AI

What is this about?

Thirty emails a day, written in a third of the time, without sounding like a robot wrote them.

The idea, in plain terms

Imran coordinates logistics from Sharjah. Most of his day is emails: chasing a truck, explaining a delay, refusing a discount, confirming a slot. He knows what to say every time. Finding the words is what takes the day. Four email shapes, ready to paste, that cover most of a week.

Key things to know

- **BAD NEWS** — a delay, a shortage, a price rise
- **CHASING** — a payment, a document, a decision
- **REFUSING** — a discount, a deadline, a special request
- **CONFIRMING** — a slot, a change, an agreement

A simple example

Situation: A customer emails at length, unhappy that a shipment is short by two cartons. They want a credit note today. Your policy is replacement, not credit.

What to do: Type the facts, your position and the tone, with no names.

Remember

- **Four shapes cover the week** — Bad news, chasing, refusing, confirming. One prompt each.
- **Facts, position, tone, ask** — Give it all four and the first draft is usually sendable.
- **Name the tone, cap the apologies** — "Firm, one apology at most" beats "make it professional".
- **Never paste the customer's email** — Describe the situation instead. The reply is just as good.
- **Subject lines carry the message** — Topic plus whether they must act. Ask for ten, keep one.
