

M-06 — Meeting Notes & Follow-ups With AI

What is this about?

Turning an hour of discussion into decisions and owners, before anyone leaves the room.

The idea, in plain terms

A weekly production meeting in Pune runs for an hour. Everyone leaves clear about the decisions. Nine days later, two of the four actions have not started, and each person believed somebody else owned them. Three columns — decision, owner, date — sent within the hour.

Key things to know

- **DECISION** — what was settled, in one sentence
- **OWNER** — one person, by name, never a team
- **DATE** — a specific day, never "next week"
- **OPEN** — what was not settled, and who will bring it back

A simple example

Situation: The weekly review has just finished. You have a page of scribbled notes, four actions somewhere in them, and ten minutes before you want to leave.

What to do: Run the three-section prompt, chase the gaps, send it by five.

Remember

- **Record decisions, not discussion** — Nobody ever goes back to read who said what.
- **One name, one date** — "The team will" is not an action. It is a gap with a sentence around it.
- **Mark the gaps, do not guess** — [OWNER?] and [DATE?] get closed in one message the same afternoon.
- **Send it the same day** — Overnight, people half-remember a different meeting and act on it.
- **Recording needs consent** — A transcript is personal data about everyone in the room.
